

Electricity Average Tariff 1998 - 2007

Note that the line for the fuel component of the tariff (blue) and the line for the total average tariff (yellow) follow the same trend while the line for the non-fuel component of the tariff (pink) is almost flat, i.e. nearly constant and is on a slightly downward trend beyond 2004. This 'pink line' represents the costs that LUCELEC has direct control over. As the trend suggests, the Company is managing these costs very effectively. The non-fuel component of the tariff 2007 is slightly lower than in 1999.
